High Speed Planner

Designed by
UIC -International Union of Railways-
FFE -Fundación de Ferrocarriles Españoles-
The High Speed Planner is a didactic tool especially designed as a complement to be used during the Training on High Speed Systems.
The High Speed Planner allows the user to develop hypotheses taking into account the main parameters to be implemented in every High Speed System project.
The participants of the Training on High Speed Systems will have the opportunity to use this special tool as a part of the training to simulate a real HSS project.

All the main elements (social, economic and environmental) will be analyzed in order to take decisions and see the resulting outcomes.
